

Feedback is part of Schaeffler's appreciating collaboration culture and a fundamental basis for learning and development. Feedback for apprentices is based on a systematic evaluation and standard templates provide guidance for reflection and dialogue. Feedback in apprenticeship is a bilateral exchange – apprentices are evaluated by apprenticeship-trainers/ -mentors and apprentices give reverse feedback to apprenticeship-trainers/ -mentors too. Mutual feedback strengthens the trustful relationship between apprentice and apprenticeship-trainer/ -mentor.

Apprentices benefit from feedback multiply, thanks to tangible learning targets, transparent fields of potential, support of positive behavior, encouraged self-driven development and strengthened self-consciousness. Feedback for apprentices is a continuous process, starting with the clarification of expectations at the beginning of the learning period. During the learning progress, apprenticeship-trainers/ -mentors regularly give feedback in concrete situations and after half time of a learning period. A final feedback after completion of each learning period wraps up a sequence in the learning process. Formal and informal feedback complement each other – for a targeted support of apprentices' learning success and competence development.

To evaluate apprentices' competences, Schaeffler defined a holistic approach – aligned as one global common sense, based on institutional core principles for vocational education and compliant with Schaeffler processes. **Vocational competence is more than knowledge.** To empathize this, the global model for apprentices' competences refers to a multiplex actionability in professional context. This includes **technical and non-technical fields of knowledge, skills and aptitudes and consider technology, professional, digital, self, social and learning competences.** These competence areas determine the selection, the development and the evaluation processes – from the beginning to the end of an apprenticeship program. A balanced combination of these competences is essential for the exercise of qualified vocational operations and self-contained, independent activities in working environment. Apprentices' competence development is supported by a theoretical and practical learning process; in-company and school based. A successful learning process strengthens the employability of apprentices – a set of skills, understandings and personal attributes that make graduates more likely to gain employment and be successful in their chosen occupations. By supporting competence development and promoting employability, **apprenticeship is preparing the graduates to live the Schaeffler Employee Essentials.**

I. GENERAL DATA

Apprentice's name	<i>Duong, Thi Quynh Nhi</i>	Department	<i>Operations & Digitalization IT – Product Delivery (RP/SVC-DHD)</i>
SAP personal ID	<i>388110</i>	Trainer's/ Mentor's name	<i>Huynh, Ngoc Hoang Tung (Shido)</i>
Occupation	<i>Dual student</i>	Training period	<i>25th May 2026 – 31st July 2026</i>
Year of training	<i>2</i>	Feedback date	<i>21.07.2026</i>

II. LEARNING PROGRESS

To evaluate apprentices' learning progress, apprenticeship-trainers/ -mentors refer to defined **learning goals and training contents**, which are determined by accredited curricula descriptions, institutional education frameworks and Schaeffler specific training portfolio. For each learning period, specific and relevant learning fields are configured in a structured rotation plan to be evaluated in the feedback dialogue.

The scale to grade the training progress is binary, to track if a required learning field was **"successfully trained"** or **"not trained"** during the learning period in the department or the training center.

By noting **"Measures in case of not trained"**, it is possible to write some marks or concrete learning deficits with examples.

Describe learning contents which are trained.	Successfully trained	Not trained
<i>Agentic AI concept</i>	☒	☐
<i>Development of Agentic AI solution</i>	☒	☐
<i>Digital solutions which are being used daily by Schaeffler in production</i>	☒	☐
<i>Introduction and usage of coding agent</i>	☒	☐
<i>Software development life cycle</i>	☒	☐
<i>Benchmarking support by comparing agentic retrieval and standard retrieval using quantitative metrics, helping the project team streamline the workflow</i>	☒	☐
<i>Type in core learning fields defined in the training plan</i>	☐	☐
<i>Type in core learning fields defined in the training plan</i>	☐	☐
<i>Type in core learning fields defined in the training plan</i>	☐	☐
<i>Type in core learning fields defined in the training plan</i>	☐	☐

Measures in case of "Not trained"

Type in measures, which are necessary for the apprentice to successfully be trained in a learning field

III. COMPETENCE EVALUATION

Based on the global competence model for apprentices at Schaeffler four categories are configured to realize an efficient apprenticeship feedback dialogue: **Professional, methodological, social and personal competence.**

The rating scales for competence evaluation are defined in three levels, referring to analogue scales in the global "Performance and Goal Management - PMGM": - = "**below expectations**", + = "**meets expectations**", ++ = "**exceed expectations**". Instead of a general required standard level, the evaluation is determined by the expectations of apprenticeship-trainers/ -mentors. These expectations must be defined and clarified in advance for each competency, each learning sequence and referring to person-relevant parameters (e.g. previous knowledge, year of training program). The rating value "meets expectations" represents 100% - apprentices meet the requirements to the full extent. By making an "**Explanatory note**", it is possible to write some marks or concrete the feedback with examples.

PROFESSIONAL COMPETENCE	-	+	++
Applies relevant technology skills according to assigned task	☐	☐	☒
Proves curiosity and passion for Industry 4.0 and Digitalization (e.g. interest in possibilities of combining industrial production with modern information and communication technology)	☐	☒	☐
Ability to analyze requirements according to future value chains (e.g. understands the content of a value chain and derived customer requirements – value stream analysis)	☐	☒	☐
Ability to identify solutions in complex systems (e.g. pays attention to interfaces within an organization and involve those accordingly)	☐	☒	☐
Applies relevant occupational knowledge for contextual requirements (e.g. read technical drawings and work orders, understands the limits and capabilities of machine)	☐	☐	☒
Plans and organizes work self-organized and target oriented (e.g. utilizes materials efficiently, attendance and punctuality)	☐	☒	☐
Works with caution for quality, time and cost of work (e.g. performs work with accuracy and precision, separate waste)	☐	☒	☐
Adheres reliably to agreed commitments, deadlines and regularities (e.g. observe and exhibit of work safety, follow work instructions)	☐	☒	☐
Overall assessment PROFESSIONAL COMPETENCE	☐	☒	☐
METHODOLOGICAL COMPETENCE	-	+	++
Ability to critically analyze processes and structures	☐	☒	☐
Ability to solve problems efficiently and effectively	☐	☐	☒
Ability to develop creative ideas options for proceeding	☐	☐	☒
Evaluates benefit of work results for business success (e.g. derived improvements measurements if business success is at risk)	☐	☒	☐
Overall assessment METHODOLOGICAL COMPETENCE	☐	☐	☒
SOCIAL COMPETENCE	-	+	++
Discusses with others in an appreciating, confidential manner	☐	☐	☒
Proves empathy for diversity and intercultural sensitivity	☐	☐	☒
Ability and willingness to help others and share knowledge	☐	☐	☒
Demonstrates respectful behavior and hold factually and focused conversations (e.g. bear no offence to one's face)	☐	☐	☒
Overall assessment SOCIAL COMPETENCE	☐	☐	☒
PERSONAL COMPETENCE	-	+	++
Ability to self-reflect and to take criticism constructive-minded	☐	☐	☒
Ability to find, critically evaluate and apply information target oriented	☐	☒	☐
Ability to learn self-organized according to individual capabilities	☐	☐	☒
Motivation to endeavor for work success and personal development	☐	☒	☐
Overall assessment PERSONAL COMPETENCE	☐	☐	☒
Explanatory notes <i>Type in notes, which are necessary to understand your evaluation or to empathize important aspects</i>			

IV. POTENTIAL EVALUATION

Type in which special strengths you noticed. 1. Proactively asks questions and clarifies the scope of work early to ensure alignment. 2. Willing to step outside the comfort zone, taking on additional coding work when needed. 3. Provides benchmarking support by comparing agentic retrieval and standard retrieval using quantitative metrics, helping the project team streamline the workflow. 4. Has grasped the core concepts of Agentic AI through learning and practice.
Type in which recommendations for further development you want to give. Highly task-focused, with room to develop more structured and efficient work methodologies.

V. NOTICE

Apprentice and apprenticeship-trainer/ -mentor confirm, that feedback below was discussed in a dialogue.
