Cloud Connector Architecture

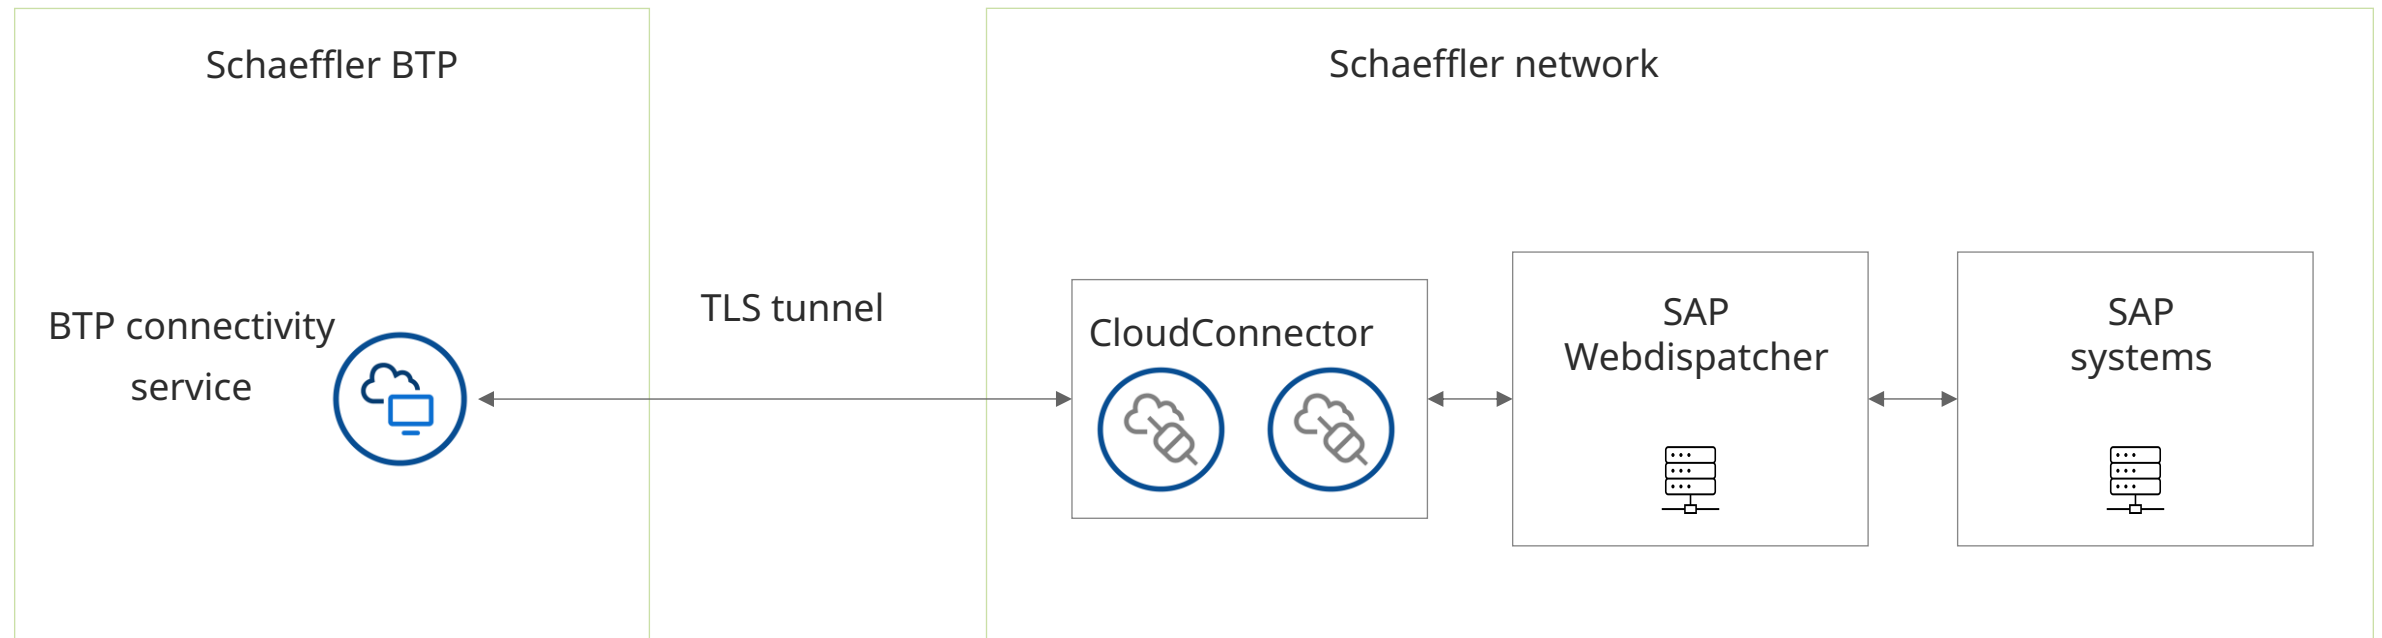

12/2024

We pioneer motion

Connection to SAP Business Technology Platform

Requirement

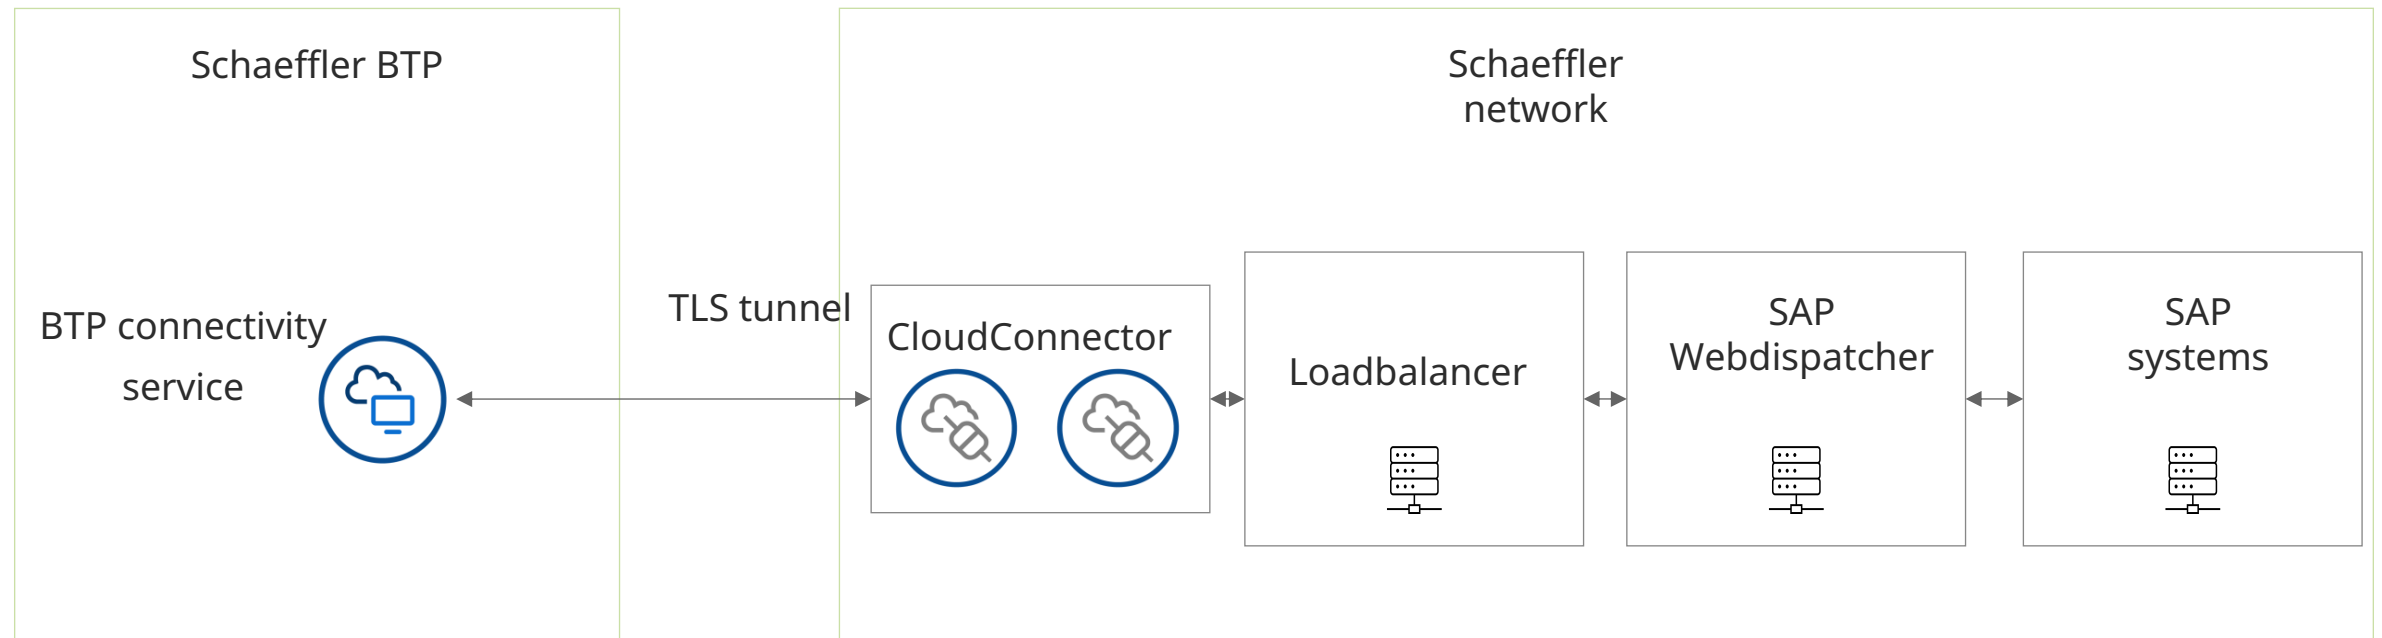

- Connect SAP BTP subaccounts via Cloud Connector to on premise systems

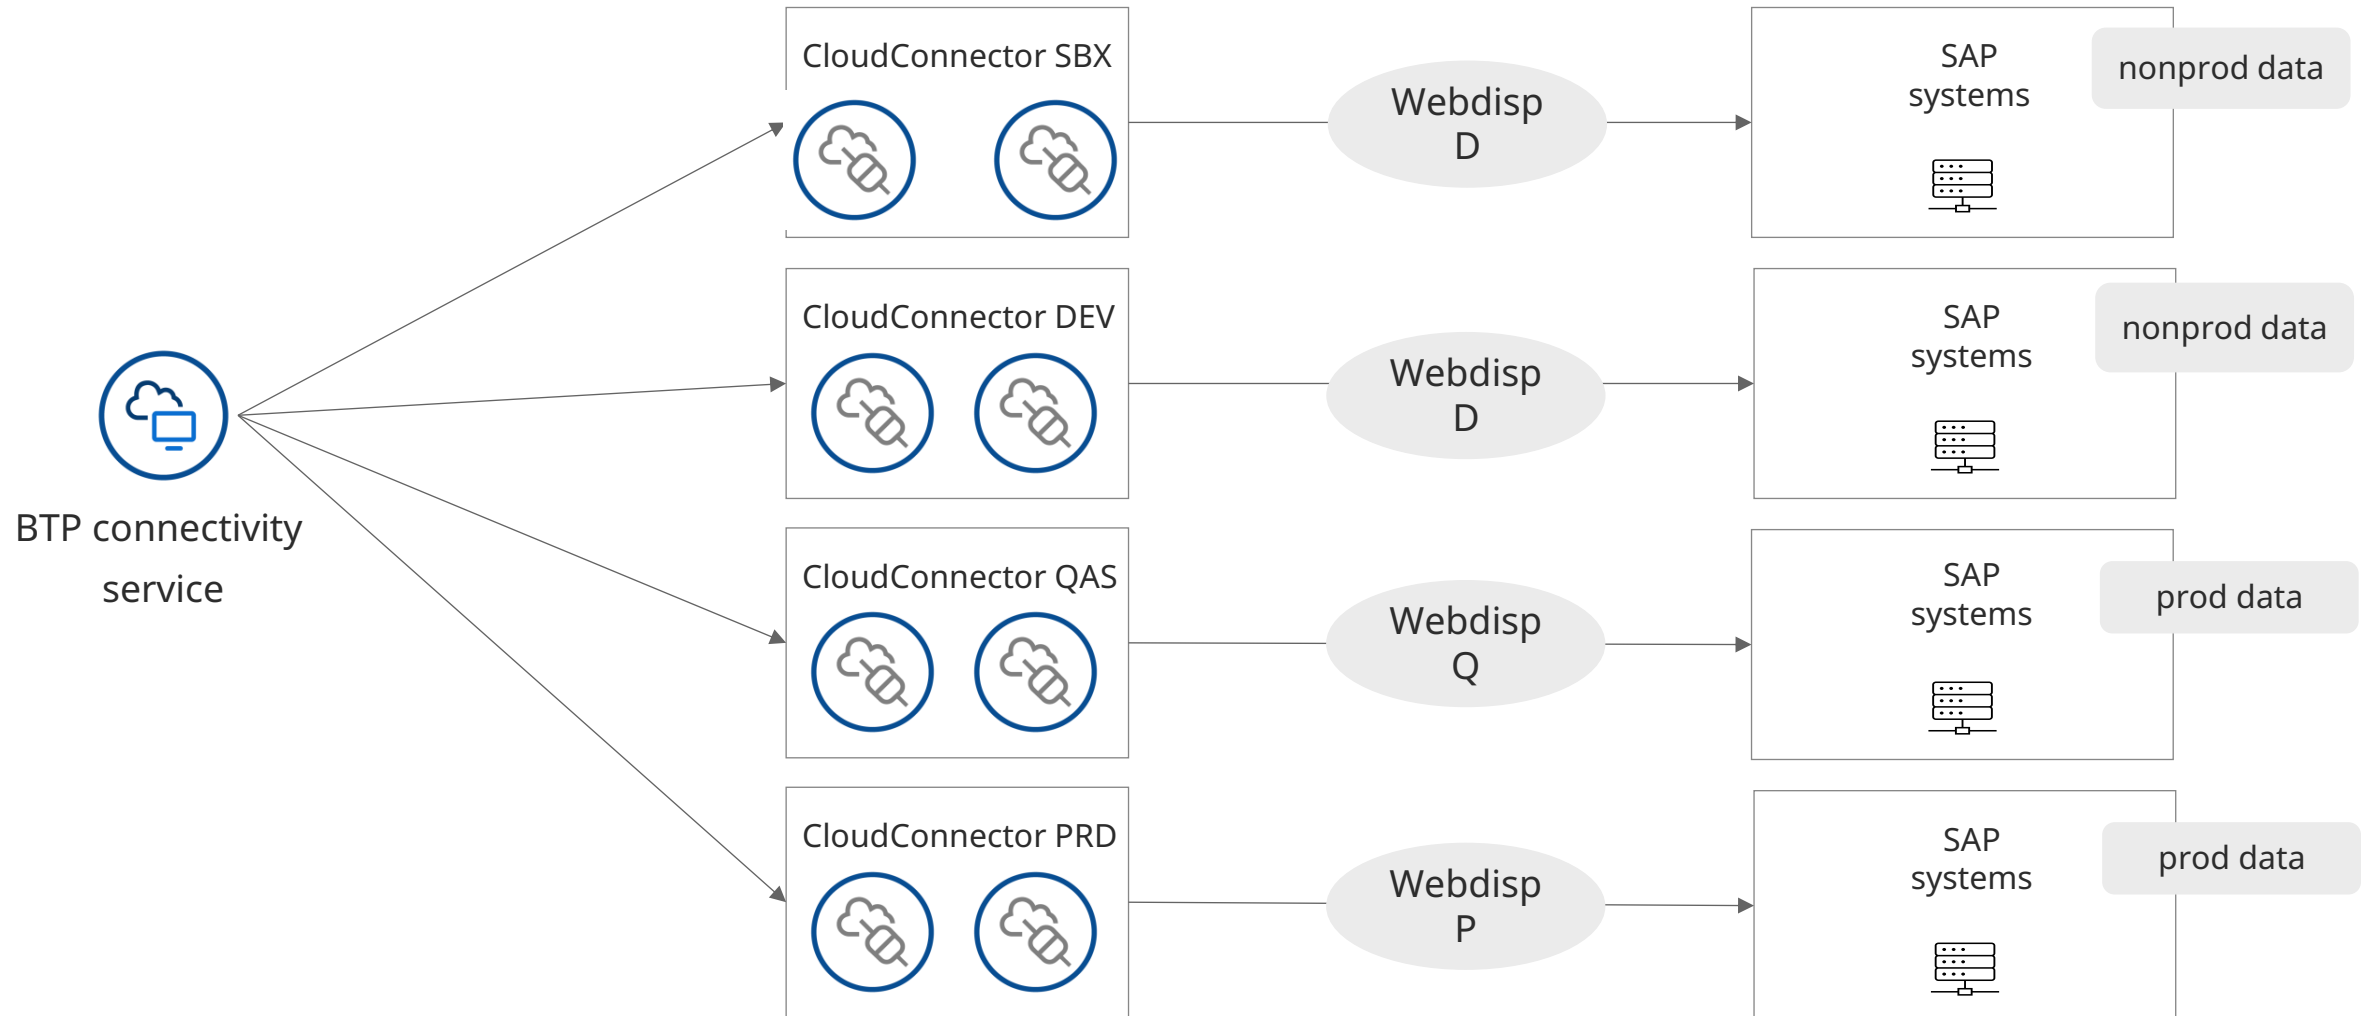

Connection to SAP Business Technology Platform (view with LB)

Requirement

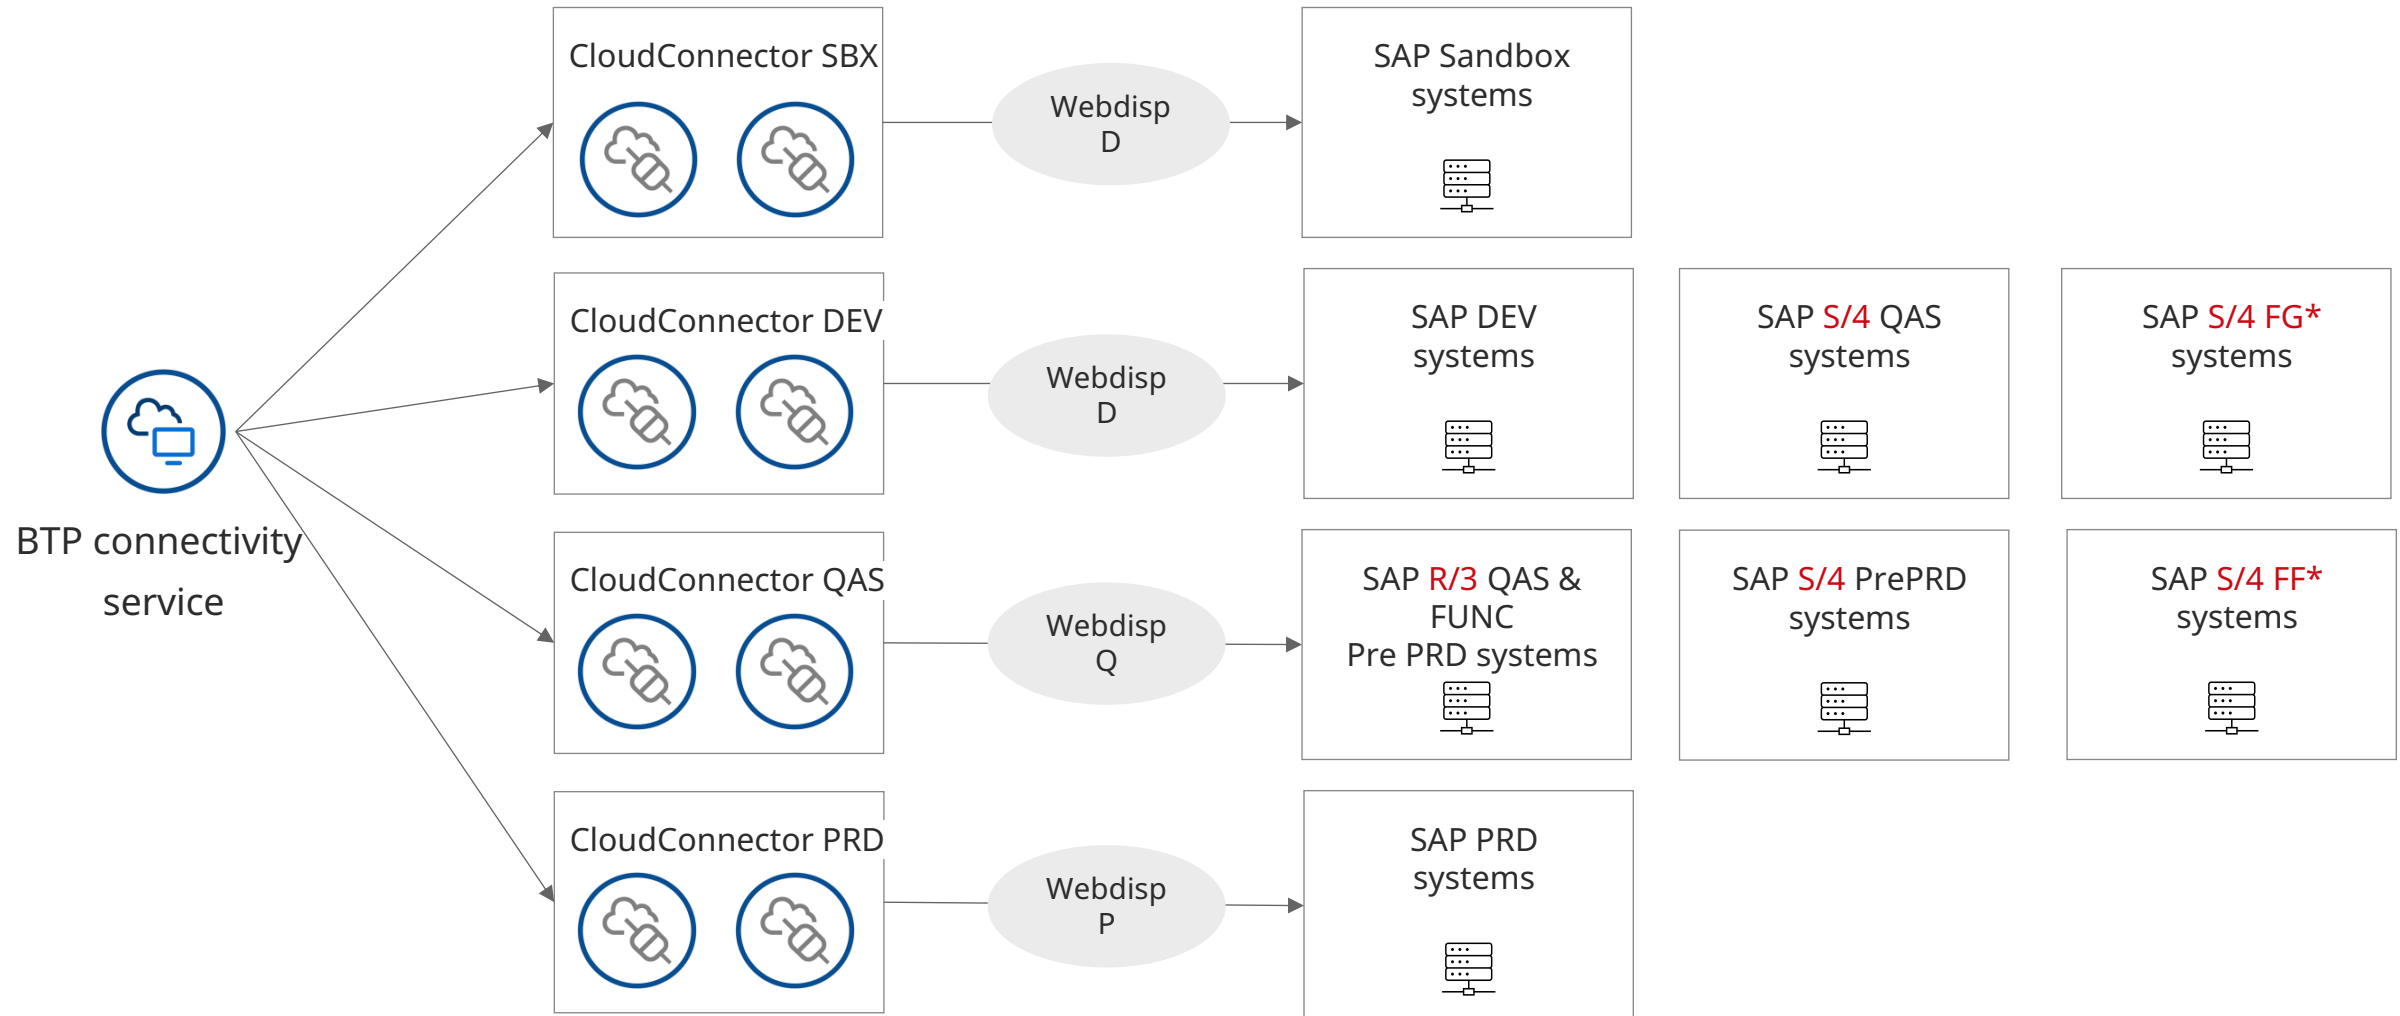

- Connect SAP BTP subaccounts via Cloud Connector to on premise systems

Connect systems according to content (data) – “Webdispatcher approach”

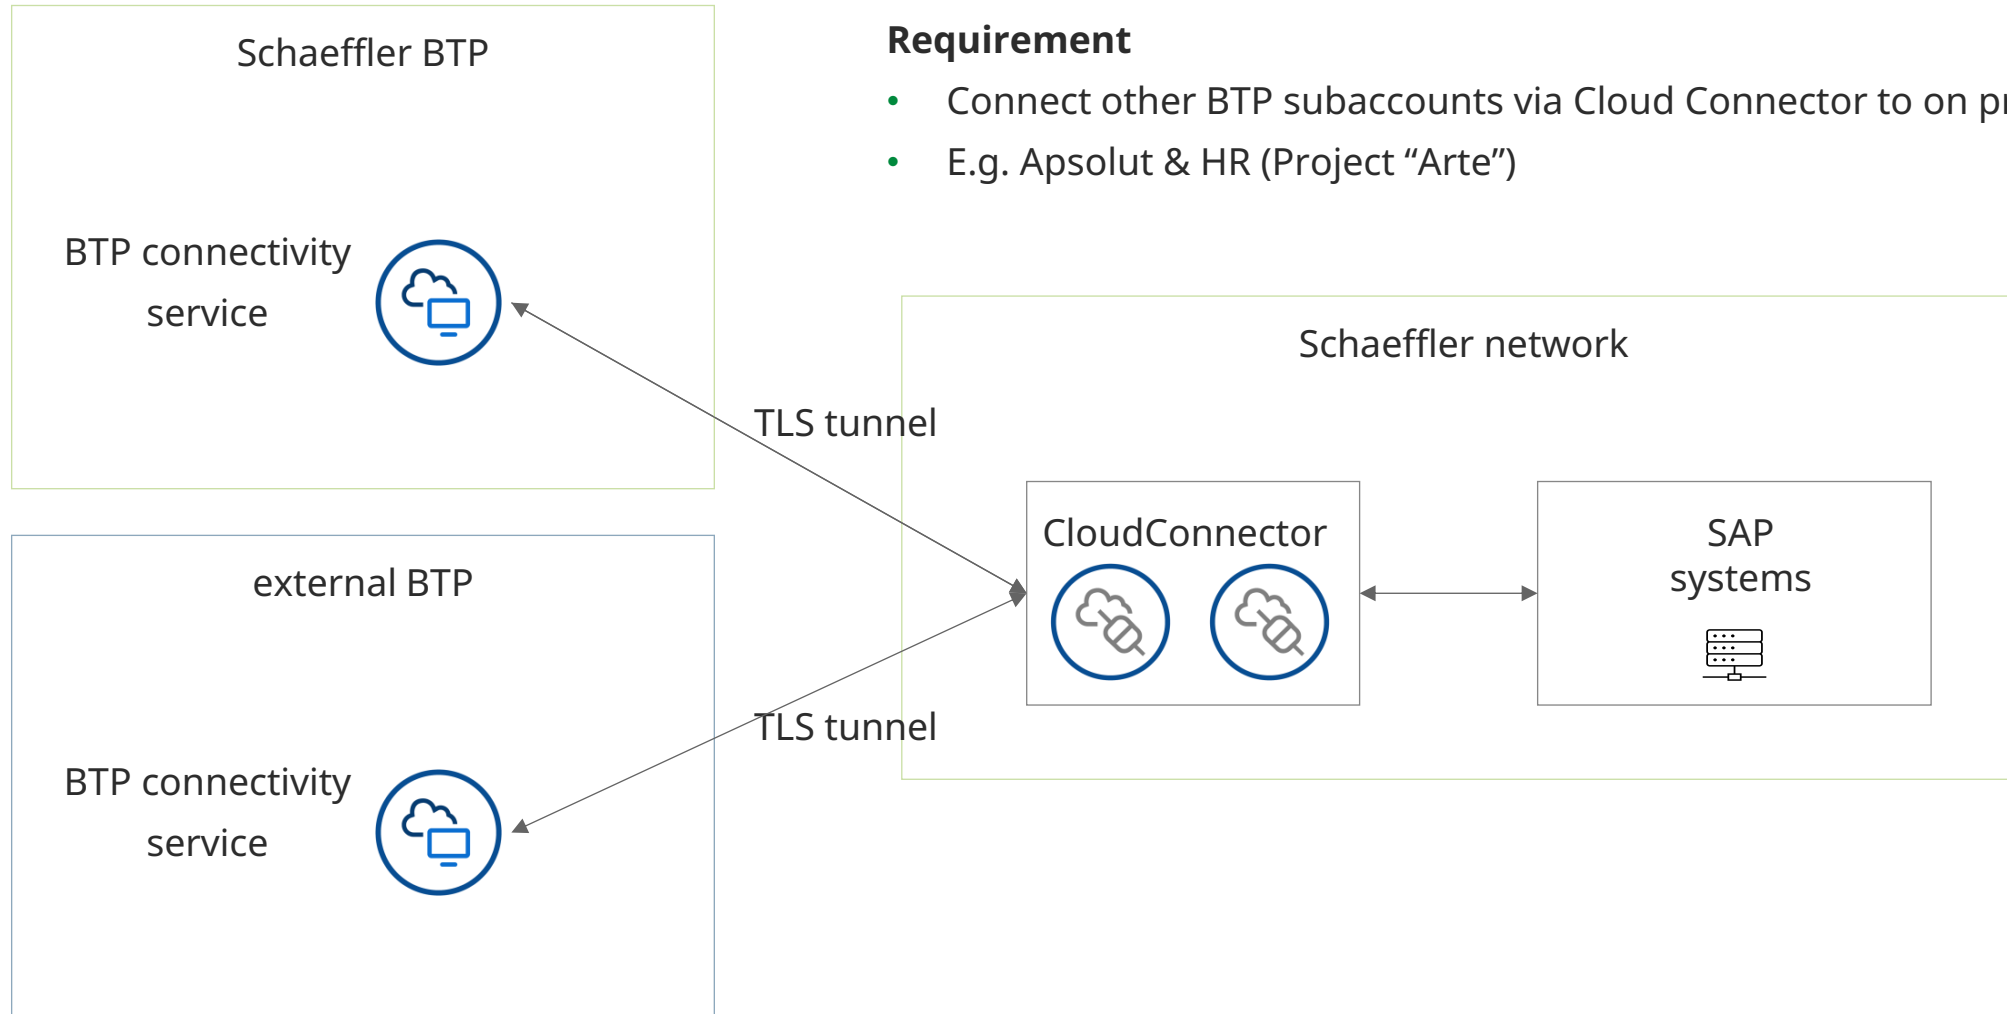

Connect systems according to content (data) – “Webdispatcher approach”

Decision target architecture

- Systems will be connected according to data, similar to webdispatcher
- Difference between QAS R/3 and S/4 in Cloud Connector
- System data (prod/nonprod) is documented in SAP systemlist

Connection of external BTPs

Connection of external BTPs

Requirement

- Connect other BTP subaccounts via Cloud Connector to on premise systems
- E.g. Apsolut & HR (Project “Arte”)

Background

- No additional admins or business user do need access to our Cloud Connector instances
- Connection to BTP subaccounts do have an own TLS tunnel, established by an admin user which must have sufficient access BTP
- Connection from BTP to onprem in Cloud Connector is separated, no overlapping user or access handling
- SAP Security Guideline only gives advices to separate nonprod/prod Cloud Connector instances

Decision

For now we do not split between BTP extern/internal

-> same CC is used for Apsolut, Arte and further requirements
