SAP Cloud Connector service requests

SAP Cloud Connector offers the possibility to connect public BTP services with onprem systems via TLS tunnel. To ensure that only needed resources are provided to the Cloud a process was established to ensure that all changes can be validated afterwards.

To ensure that as less as possible internal information is provided to the cloud a hostname mapping is used and only dedicated resources are released:

- 1) virtual hostname (must not be a real/reachable hostname)
- 2) Internal hostname (must be the real/reachable hostname)
- 3) Resources (e.g. SAP SICF service)

Mapping Virtual To Internal System (5)

Status	Virtual Host 1	Internal Host 2	Check Result	Protocol	Back-end Type	Actions
✓	vblage443	schaeffler.com:443	Unchecked	HTTPS	ABAP System	    
✓	vblage443	schaeffler.com:443	Unchecked	HTTPS	ABAP System	    
✓	vblage443	schaeffler.com:443	Unchecked	HTTPS	ABAP System	    
✓	vblage443	schaeffler.com:443	Unchecked	HTTPS	ABAP System	    
✓	vblage443	schaeffler.com:443	Unchecked	HTTPS	Non-SAP System	    

Resources Of vblage443 (2) **3**

Status	URL Path	Access Policy	Actions
✓	/sap/sicf/sap/...	Path And All Sub-Paths	   
✓	/sap/sicf/sap/...	Path And All Sub-Paths	   

SAP Cloud Connector service requests – how to

To request new connections to onpremise systems, or to release new resources, please use the following Snow form:

[SAP Cloud Connector request](#)

Necessary details to be provided as stated in the form. Some additional Information:

Location ID = SAP Cloud Connector connection (DEV/QAS/PRD) depending on the target connection

Virtual host = if new, it might be necessary to align. We will contact you if the proposal is not fitting

Internal host = In case of SAP systems, webdispatcher is used (we will adjust the hostname if needed)

Ports = used always 443 (we will adjust internal one if needed)

In case of any questions or problems please [contact us](#).
